## Index methodology

Thematic fund and ETF identification

Extraction of dominant underlying components

Thematic index construction

Galilee Asset Management, acting as the index selection party, developed a model that identifies all relevant thematic funds and ETFs by reviewing their names and strategy descriptions using different data vendors. The model checks whether index name keywords are present in the name and/or strategy descriptions of the thematic funds and ETFs. This ensures comprehensive coverage of the investment universe.

Then, the model analyses the holdings of these funds and ETFs to detect the most held securities. The top 50 stocks with the highest presence across the fund universe are selected for index inclusion. Additional market capitalization and liquidity criteria are applied to ensure the exposure is investable and suitable for structuring purposes.

The index is fully rules-based, with no discretionary intervention in the selection or weighting of the constituents.

## Space Exploration: A differentiated investment theme

The Space Exploration thematic is a dual-faceted investment theme, positioned at the intersection of the aerospace and defense sectors. Long reserved for governments and major public agencies such as NASA or ESA, space activities have evolved into a true arena of innovation, competition, and investment. In recent years, the rise of the “New Space” ecosystem has led to the emergence of private companies developing civilian technologies such as satellite constellations, Earth observation systems, and cost-efficient launch capabilities. These innovations rapidly find military applications, making space a critical strategic asset, as illustrated by the central role played by Starlink in recent conflicts.

For investors, the thematic offers a blend profile, neither growth nor value, benefiting from both cutting-edge innovation driven by private companies and the significant investments made by governments in defense. Valuations remain attractive, with a P/E ratio of around 24.7x (as of early 2026), slightly above the MSCI World (24.3x). At the same time, the theme benefits from solid forecasts for revenue growth (around +10% CAGR) and earnings growth (around +12% CAGR) over the next three years. Overall, the Space Exploration thematic offers exposure to a young and innovative investment universe with strong long-term growth potential.

## Index information

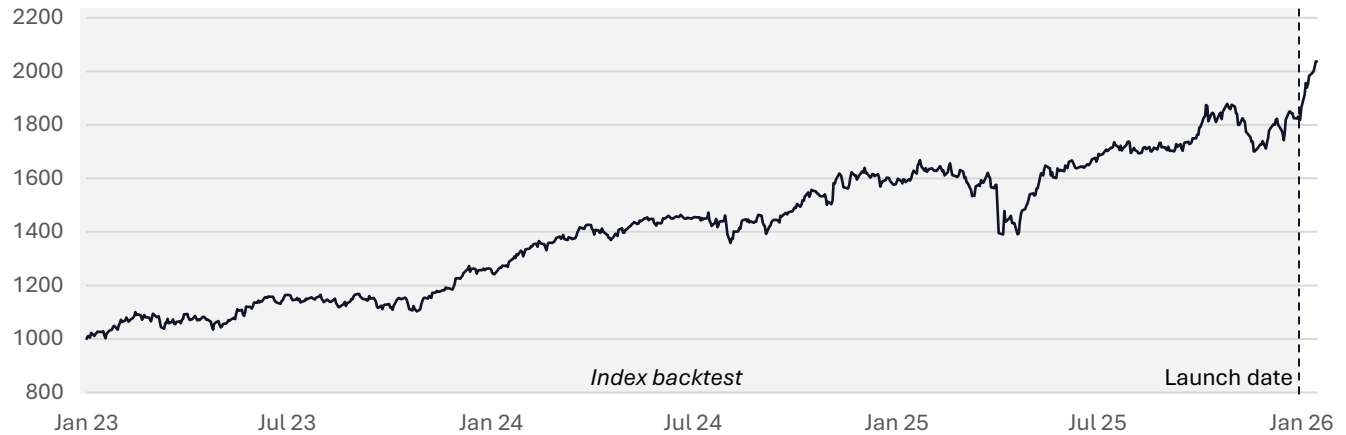

Name :	<b>Solactive Galilee Space Exploration EUR Index TR</b>
Type :	Total Return
ISIN :	DE000SLOSG30
Bloomberg Ticker :	SOLGASET Index
WKN :	SLOSG3
Launch date :	05 January 2026
Calculation currency :	EUR
Index provider :	Solactive AG
Calculation agent :	Solactive AG
Selection party :	Galilee AM
